FOCUS AND SCOPE

African Invertebrates is an international peer-reviewed journal that covers the taxonomy, systematics, biology, biogeography, ecology, conservation and palaeontology of Afrotropical invertebrates, whether terrestrial, freshwater or marine, published jointly by the Council of the KwaZulu-Natal Museum and Pensoft Publishers. A printed version of the journal is produced twice a year. All contributions are published in English (British Standard), with an option to add an abstract in any other language that uses Latin or Cyrillic alphabet. When preparing manuscripts, authors are encouraged to make use of extensive holdings of the KwaZulu-Natal Museum and other South African museums and collections, and to deposit holotypes (paratypes) and voucher specimens in recognised South African institutions.

All content is Open Access distributed under the terms of the Creative Commons Attribution License, which permits unrestricted use, distribution, and reproduction in any medium, provided the original author and source are credited. Authors are thus encouraged to post the pdf files of published papers on their homepages or elsewhere to expedite distribution.
