After the publication of this article, it was brought to our attention that there was an error in the caption for Figure 2. The caption should read:

**Figure 2.** Right mandible in dorsal view and mesothoracic spiracle of mature Afrotropical *Thanatophilus* larvae. The arrows indicate species-specific diagnostic characteristics: *T. micans* has two ventrolateral mandibular setae and two spiracular setae, while *T. mutilatus* has three ventrolateral mandibular setae and one spiracular seta.
